

## Note to Designers:

**If you are making a FLASH banner, please read the below instructions FIRST to avoid delays in banners going live.**

### Flash banners - links

You **MUST** follow the instructions below. If you don't, it will FAIL our checks, and won't go live on the site!

It's quite simple. In your flash file, you will have a line of code something like below:

```
getURL("http://www.yourdomain.com/","_blank");
```

This line will be on the click action of a button somewhere. It tells flash to open a web page. (http://www.yourdomain.com/ will be replaced with the URL you're linking to!)

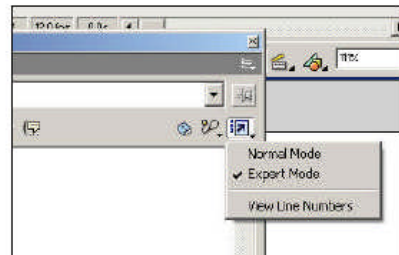

You must change that line so it reads:

```
if (_level0.linkTag.substr(0,5) == "http:")
    getURL(_level0.linkTag,_level0.targetTag);
else
    getURL("http://www.yourdomain.com/","_blank");
```

This instructs flash to open the page that our site tells it to. This will re-direct to your preferred URL after registering a banner click in our database. This way we can track how many clicks your banner gets.

#### Note

To change the action-script code you must be using Flash in Advanced mode. To activate advanced mode, click the button pictured to the right:

### Flash banners – background colours

When it's placed on the page, your banner will have its background colour forced to white. If you require a different background colour, you **MUST** put a coloured layer behind your flash (and NOT rely on the background colour). If you don't do this, your banner will get a white background!
